Insecticide Being Used To Battle Plague That Threatens Black-Footed Ferrets

Biologists will soon begin spreading insecticide to kill off fleas that spread plague, which is threatening endangered black-footed ferrets and the prairie dog population in an area of South Dakota, the Rapid City Journal reports. [View the article>>](#)

See A Black-Footed Ferret

The Smithsonian National Zoological Park is one of the few breeding facilities for black-footed ferrets, and you can see the ferrets on the Ferret Cam. [Visit the website>>](#)

Rabies Cases On The Rise

A county in Maryland already is logging an above-average number of cases of rabies. Officials urge residents to keep their pets' rabies vaccinations up to date. The Cumberland Times-News reports. [View the article>>](#)
